## Managed VPS

Big or small, website or application - we have a VPS configuration for you.  
**Plans starting with 1GB RAM and 30GB SSD Storage.**

### Migration to VPS

Simple Migration and Management

**Managed VPS** allows you to automatically migrate your websites to Managed VPS upon signing up for a plan. From there, managing hosting for your sites uses the same interface as our other hosting products, so there's next to no learning curve!

### VPS

Servers Exclusive

Specs Scalable

RAM Starting at 1GB

Pricing strat at INR 2400/-per month Get 5% discount on yearly pricing

Based on our lowest-tier VPS plan with 1 year pricing

### 2X More Powerful than Shared Hosting

Even our lowest-tier Managed VPS configuration offers twice the specs over standard shared hosting.

Add to that your own, private server resources and you can be sure you'll be getting a higher level of performance for your website.

### Future-Proof Hosting that Grows with Your Business

Managed VPS offers 4 different tiers of plans to ensure that your website won't outgrow its hosting any-time soon, and changing a plan is always fast and simple.

### Top-Tier Performance at Reasonable Prices

Get premium performance starting at just a few bucks more than shared hosting plans!

### An All-In-One Hosting Solution

All of our Managed VPS plans also include unlimited bandwidth, MySQL databases, email accounts, and 24/7 support! Plus enjoy free SSL/TLS certificates, a 100% uptime guarantee, and more!

## Virtual Private Servers

### *Advanced Features*

Automatic Software Updates

Save time as our experts handle installation of security patches, Ubuntu OS updates, PHP releases, and the latest WordPress versions.

Apache or Nginx

When it comes to web servers, one size does not fit all! Choose between Apache or Nginx.

Unique IPv4 and IPv6

Get an IPv4 address and future-proof your account with an unlimited number of free IPv6 addresses.

Unlimited SFTP Users

Grant access to the people you trust with secure logins to your data.

PHP7/Perl/Python

Ah yes, the three Ps. Build something great.

Node.js

Node.js works best in a powerful VPS environment. Let your server-side JavaScript freak flag fly!

Ruby Version Manager (RVM)

Need more than one version of Ruby? RVM makes it easy.

One-Click Application Installer

WordPress is just a click away. Our automated installer installs WordPress and several other web apps in just seconds!

Secure Shell (SSH) Access

Live the command-line life. Gain secure remote access and get down to business.

OPcache

OPcache makes PHP scream by compiling your code once and storing it in memory. Silently. Always watching. Always ready. Like a jilted lover. Or a trained killer.

Phusion Passenger

Unlock the power of Apache with Ruby, Python, and Node.js working together atop Phusion Passenger's optimized platform.

## Crontab Access

Automate even the most obnoxious command-line tasks with access to Cron, a time-based job scheduler.

## Subversion Repository (SVN)

Working in teams on the same web app or web site means you'll step on each other's toes from time to time. SVN keeps it all straight and minimizes conflicts.

## Access to Raw Log Files

If the devil told you he wasn't evil, would you trust him? You'll be able to run your site's raw log files through your log analyzer of choice and - bonus - you won't sacrifice website load times due to embedded external trackers.

## Password Protection (.htaccess)

Password-protect any directories on your website for "members only" access to sensitive content.
